R&S TOGETHER WITH AVL

A SUCCESSFUL PARTNERSHIP FOR A GAME-CHANGING VIL SOLUTION

REALISTIC TESTING ON VIRTUAL ROADS

A dark blue car is shown in an anechoic chamber, surrounded by blue acoustic foam. A radar sensor is mounted on a stand in front of the car, and a control console with a screen and buttons is positioned to the left. The scene is dimly lit, emphasizing the car and the testing equipment.

Part II

THE SYSTEM

Simulated parameters:

- Object distance
- Radial velocity
- Object size

-  Radar Signal
-  Echo Signal

Simulated parameters:

- Object distance
- Radial velocity
- Object size
- **Angular direction**

-  Radar Signal
-  Echo Signal

UNIQUE FEATURES – AREG800A TOGETHER WITH QAT100

Performance optimized system

Scalable solution

360° simulation possible

3 level service and support structure

One stop solution from R&S

Seamless integration via Open Simulation Interface

Worldwide service and support

EXEMPLARY DRIVING SCENARIOS

MATCHING INSTRUMENT CONFIGURATIONS

Enables selected NCAP, AEB and ACC scenarios

- Simulation of targets moving in azimuth, range, radial velocity and target size.
- Stimulation of a single radar sensor.

EXEMPLARY DRIVING SCENARIOS

MATCHING INSTRUMENT CONFIGURATIONS

Enables advanced NCAP, AEB, ACC and other scenarios

- Simulation of targets moving in azimuth, range, radial velocity and target size.
- Simultaneous stimulation of multiple radar sensors.

R&S®QAT100 AND R&S®AREG800A

THE MISSING PUZZLE PIECES FOR TESTING RADAR BASED AUTONOMOUS DRIVING FUNCTIONS

R&S®AREG800A

Automotive Radar Echo Generator

R&S®QAT100

Advanced Antenna Array

Part III

FRONTEND - R&S®QAT100 ADVANCED ANTENNA ARRAY

R&S®QAT100 UNIQUE FEATURES

No mechanical movement

Immune to vibration

96 TX antennas per frontend

4GHz instantaneous bandwidth

Extremely short distances

Azimuth and elevation simulation

Precise and repeatable

Clean RF - no reflections from FE

Scalable solution

R&S®QAT100

OVERVIEW

Front panel with two lines of TX antennas. The offsetted RX antennas operate with their respective segments.

Back panel with SMA connectors for the individual segments. LCD display for direct interaction with the panel.

R&S®QAT100

MECHANICAL OUTLINE

R&S®QAT100 ADVANCED ANTENNA ARRAY

QAT-Z50 SHIELDING SYSTEM

► QAT-Z50 shielding system

- 50 cm long, 10° opening
- Direct mounting kit for QAT

► Challenges

- Car mounting kit respectively QAT stand in front of car
- Customization based on e.g. CAD required

ANGULAR RESOLUTION & FIELD-OF-VIEW

The field-of-view (FOV) and angular resolution achievable with the R&S®QAT100 are dependent on the setup but can be calculated as follows:

Field-of-view:

$$\alpha = 2 \cdot \tan^{-1} \left(\frac{351 \text{ mm}}{d} \right)$$

Angular resolution:

$$\Delta\alpha = \tan^{-1} \left(\frac{3,7 \text{ mm}}{d} \right)$$

ANGULAR RESOLUTION & FIELD-OF-VIEW

Distance (d)	Field-of-view (α)	resolution ($\Delta\alpha$)
500 mm	38,7°	0,42°
700 mm	28,1°	0,30°
1000 mm	19,9°	0,21°
1500 mm	13,34°	0,14°
2100 mm	10,0°	0,10°

$$\Delta\alpha = \tan^{-1}\left(\frac{3,7\text{mm}}{d}\right)$$

$$\alpha = 2 \cdot \tan^{-1}\left(\frac{351\text{mm}}{2 \cdot d}\right)$$

ANGULAR RESOLUTION AND FIELD-OF-VIEW

- ▶ There is an airgap of about 27 mm from the outer-most antenna to the edge of the QAT.
- ▶ When positioned next to each other, this results in a gap < 54 mm between the two instruments.
- ▶ It is therefore advisable to use an uneven number of QATs in the setup to not have the gap in the middle of the FOV.

Part IV

BACKEND - R&S®AREG800A AUTOMOTIVE RADAR ECHO GENERATOR

RADAR OBJECT SIMULATION FOR ADVANCED SCENARIOS

APPLICATIONS AND T&M CHALLENGES

- ▶ Advanced tests during R&D of automotive radar sensors and testing of ADAS features require dynamic variation of artificial objects
- ▶ These artificial objects must be dynamic in terms of:
 - Distance
 - Size (Radar Cross Section – RCS)
 - Radial velocity (Doppler frequency shift)
 - Angular direction
- ▶ Higher levels of autonomous driving require multiple radar sensors in a single vehicle which have to be stimulated simultaneously

- installation point of SRR sensors
- installation point of LRR sensor

R&S®AREG800A – SCALABILITY AND FLEXIBILITY

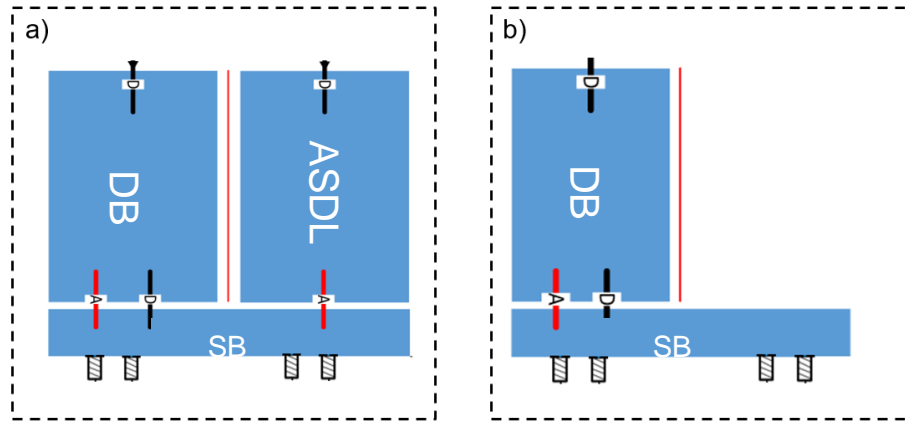

TECHNICAL INSIGHTS

R&S®AREG800A – SCALABILITY AND FLEXIBILITY

MODULAR CONCEPT

- ▶ The digital board (DB), the IF switching board (SB) and the optional analog stepped delay line board (ASDL) are forming the smallest backend module
- ▶ A module has one (for 5GHz bandwidth) or two (for 2GHz bandwidth) IF paths, each with individual A/D and D/A conversion
- ▶ Each module provides the IF connection and control interface for mmW frontends (e.g. AREG8-77S frontend covering the 76-77 GHz automotive radar band)

OPERATION - AREG800A WITH QAT100

SIGNAL DISTRIBUTION OVERVIEW

A – One QAT100 and one AREG800A
For simulation of dense scenarios

Individual IF path for each of the 8 array segments of the QAT (each containing 24 TX antennas)

B – Multiple QAT100s and one AREG800A
For covering wide Field-of-Views

Individual IF path per QAT addressing one full antenna line (containing 96 TX antennas)

C – mmW Frontends and AREG800A
For bench top test cases

Individual IF path per mmW frontend

SUMMARY – R&S®AREG800A OPERATION

R&S®AREG800A together with R&S®QAT100 –
Up to 8 independent angular directions with max. 1 individual artificial object each.

R&S®AREG800A together with mmW remote frontends
– Up to 4 mmW frontends can be connected to a single base unit with up to 8 individual artificial objects each.

OUR SOLUTION FOR TESTING OF AUTOMOTIVE RADAR

UNIQUE SOLUTION FOR TESTING LARGE APERTURE AUT RADAR SENSORS

SYNCHRONIZATION OF MULTIPLE FRONTENDS

R&S®AREG800A – SCALABILITY AND FLEXIBILITY

SYNCHRONIZATION OF MULTIPLE FRONTENDS & BACKENDS TO GENERATE LARGE SCENARIOS

Part V

RECOMMENDED CONFIGURATION

EXEMPLARY CONFIGURATION I

BASIC BENCH TOP AND R&S®ATS1500C USAGE

Consists of:

1. R&S®AREG800A Automotive Radar Echo Generator
2. One mmW frontends (multiple frontends possible)

Key features:

- 4 GHz bandwidth with mmW frontend
- Fully harmonized with ATS1500C and CATR
- Dynamic artificial objects with individual distance, RCS and radial velocity
- Dynamic objects:
 - 1 object down to < 4m
 - Up to 8 objects in the range of <15m to >1000m
- IF input, IF output and HiL interface

EXEMPLARY CONFIGURATION II

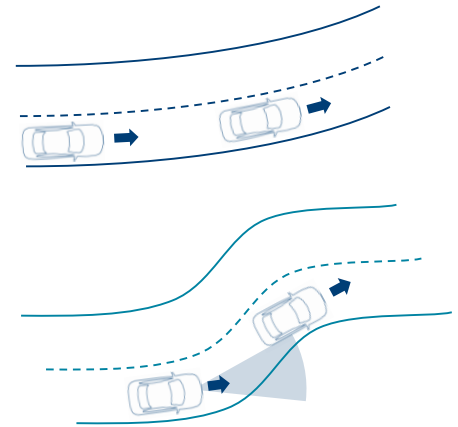

BASIC ADAS FEATURE TEST

Consists of:

1. R&S®AREG800A Automotive Radar Echo Generator
2. One R&S®QAT100 advanced antenna array

Key features:

- 4 GHz bandwidth with R&S®QAT100A advanced antenna array
- Dynamic artificial objects with individual distance, RCS and radial velocity and **azimuth**
- Dynamic objects:
 - 1 object down to < 4m
 - 2 objects in the range of <15m to >1000m
- IF input, IF output and HiL interface

EXEMPLARY CONFIGURATION III

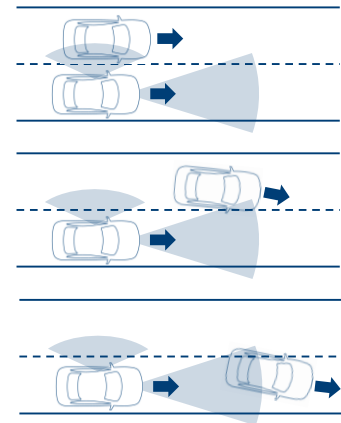

ADVANCED ADAS FEATURE TEST

Consists of:

1. R&S®AREG800A Automotive Radar Echo Generator
2. Three R&S®QAT100 advanced antenna arrays (up to 8 possible)

Key features:

- 4 GHz bandwidth with R&S®QAT100A advanced antenna array
- Dynamic artificial objects with individual distance, RCS and radial velocity and **azimuth**
- Dynamic objects:
 - 2 objects down to < 4m (up to 4 objects possible)
 - 4 objects in the range of <15m to >1000m (up to 8 possible)
- IF input, IF output and HiL interface
- Capability to stimulate multiple radar sensors in parallel
